For this assignment, you are being asked to research Arduinos, learn some things about them, then write (and answer) <u>ten questions</u> related to what you have learned.

Note: all answers must be in your own words, with proper spelling and grammar.

If you are unsure of where to start, here is a [hint](#). Here is [another hint](#).

Question #1 has been done for you.

Note: You must provide the source for each of your responses.

Q1 - What is an Arduino?

A1 - An Arduino is an open source microcontroller board that can be programmed. It allows you to interface to sensors and electronic circuits.
